Algerian Sources

Şālih Ibn Muḥammad Al-‘Antarī. *Farīdah manīṣah [sic] fī ḥāl dukhūl al-Turk balad Qusanṭīnah wa-istīlā’ihim ‘alā awṭānihimā, aw, Tā’rīkh Qusanṭīnah*. (Unknown original publication date; 1991)

Gaïd, Mouloud. *Chronique des beys de Constantine*. (1978).

In attempting to give an account of the harem institution in the sixteenth and seventeenth centuries, we thus find ourselves on the horns of a dilemma: do we reject everything that European accounts tell us and thus retain only the fragments that can be acquired from Ottoman sources, or do we risk compounding the errors of European writers by admitting their evidence?

European Sources

Arvieux, Laurent d'. *Mémoires Du Chevalier d'Arvieux*. (1735)

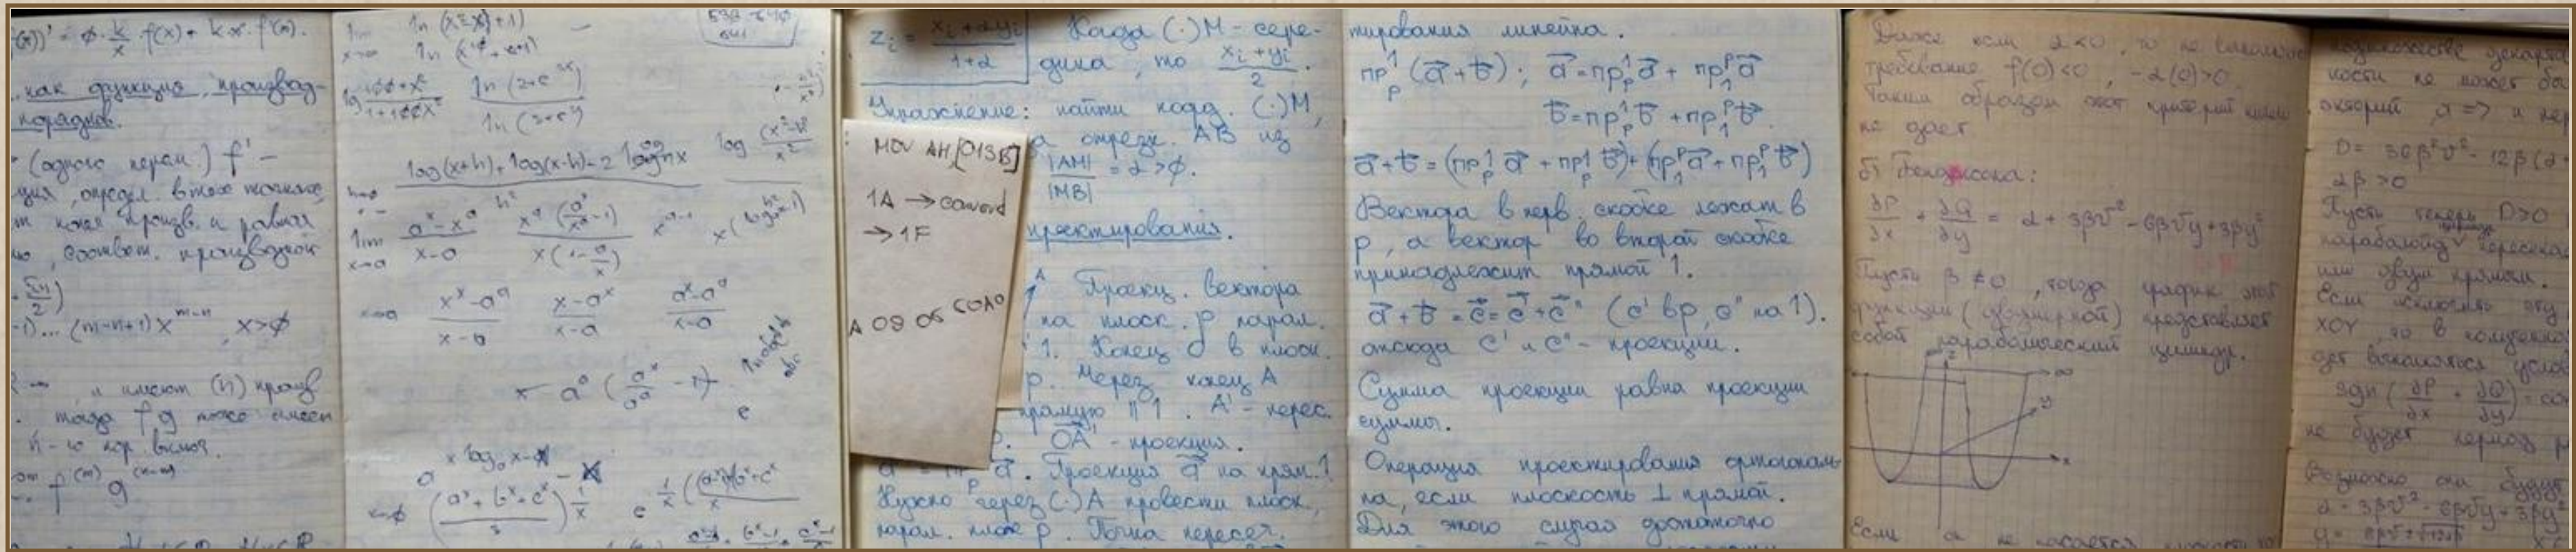

Haëdo, Diego de. *Topographie et histoire générale d'Alger*. Ed. Jocelyne Dakhli. (1612; 1870)

Mercier, Ernest. *Histoire de Constantine*. (1903)

Peyssonnel, Jean-André. *Voyages dans les Régences de Tunis et d'Alger, fait de 1783 à 1786* (1838)

Tassy, Laugier de. *Histoire du royaume d'Alger*. (1725)

Vayssettes, Eugène. *Histoire de Constantine Sous La Domination Turque de 1517 à 1837*. (1867)

In resisting the naturalization of data, historian[s] create a situation where they can be much more careful about the claims and conclusions that rest on that data. Their hands and interpretations are only one of many that have touched these sources from the point of their creation to the present.

Structuring Data for Analysis & Reuse

- ◆ Each instance/case has a unique numeric or alpha-numeric identifier
- ◆ Each column contains only one variable
- ◆ Each column contains the same kind of information
- ◆ Every column contains the same number of entries, which creates the rectangular shape of the data set
- ◆ Every cell (the intersection of one row and one column) is filled with a value, even if that value simply denotes missing information or that the variable is not applicable for that case
- ◆ Every cell contains only one piece of information

Creating a Classification System

Rule # 1

The set of classes must be inclusive, meaning that they must cover all descriptions of that attribute

Rule # 2

The classes must not overlap, meaning that one description from the initial data input cannot fall into two different classes

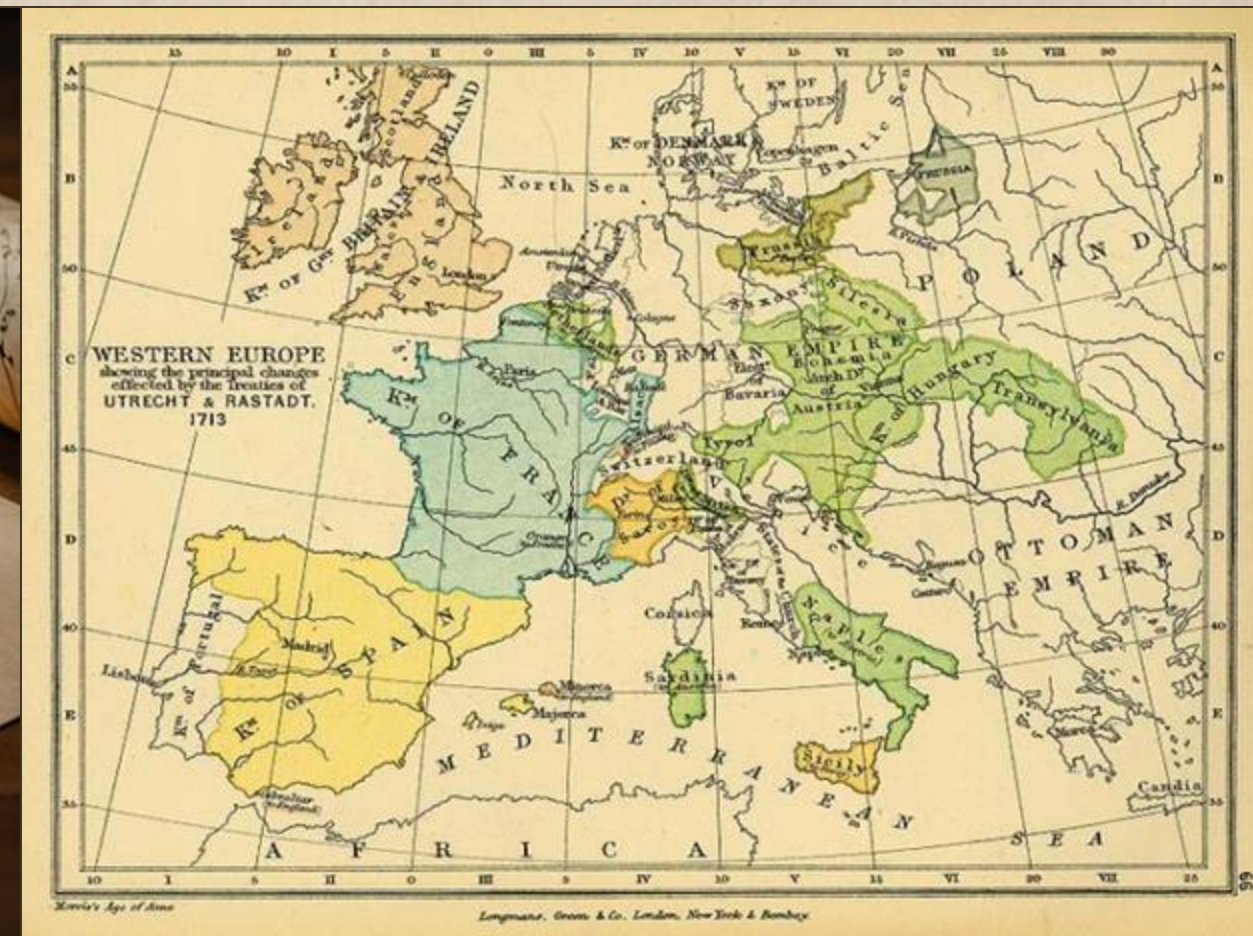

Abstraction

Constructing classes from the source descriptions reduces the descriptive details available in our dataset, but it makes comparisons and statistical inquiry possible

Name in Sources	Transliterated Name	Name-Arabic Script	Start Date	End Date
<u>Ramdane-Tchoulak Bey</u>	<u>Ramdane-Tchoulak Bey</u>	رمضان تشولاق باي	1567	1574

Ibrahim bey El Euldj	1703	1707	Willful Violent Removal	Assassinated	Assassinated

Ethnicity

Ottoman

The local populace regarded Ottoman officials, regardless of true ethnicity, as an imperial other. That fact mattered.

Algerian & Kulughlu

Algerian = "from Algiers"
Kulughlu = mixed ethnicity Ottoman & Algerian

European

European by birth, then captured and enslaved in the Ottoman Empire, these men could still rise to the highest imperial offices

Data Silences

04

Can Data Silences “Speak”?

Overview of Data

Ethnicity

Gender

Presence and Absence

What does it mean that the references I have found thus far are some of the only, and may, indeed, be the only mentions of these men and women that still remain in the historical record and that they are written primarily in French?
